About Chinese Gas Wok Cooker

A **wok** is a versatile round-bottomed [cooking vessel](#) originating in [China](#) . It is used especially in [East](#) and [Southe](#)
[ast Asia](#)

Woks are most often used for [stir frying](#) , but can also be used in other [Chinese cooking techniques](#) , such as in [steaming](#)

,
[deep frying](#)

,
[braising](#)

,
[stewing](#)

,
[smoking](#)

, or making

[soup](#)

. They are commonly, almost exclusively, cooked with a long handled

chahn

(

[spatula](#)

) or

hoak

(

[ladle](#)

). The long extensions of these utensils allow the cook to work with the food without burning the hand

Chinese gas wok cookers are specifically designed for Chinese cuisine. The cookers are hand manufactured from heavy gauge stainless steel with a tubular stainless steel framework to meet British safety standards.

These days, Chinese Gas Wok Cookers are widely used in the UK for various business owners who are in Chinese Cuisine business such as chinese takeaway, chinese restaurant, asian restaurant or even some hotels that offer fried food cooking

A constant flow of cold water across the cooking top keeps the surface cool and clean and preventing burnt-on deposits, and creates a comfortable working environment for staff. They are stylish and look good in a restaurant kitchen.

Chinese cuisine gas cookers are manufactured in various ring sizes.

- British made to meet CE regulations
- The cooker top is pressed out with lift out rings for easy cleaning
- Lift out waste filter box and front drain trough
- If a variation of burners is required these can be fitted at no extra cost

The main advantage of wok beyond its constructed material is its curved concave shape. The shape produces a small, hot area at the bottom which allows some of the food to be seared by intense heat while using relatively little fuel. The large sloped sides also make it easier for chefs to employ the tossing cooking technique on solid and thick liquid food with less spillage and a greater margin of safety. Curved sides also allows a person to cook without having to "chase the food around the pan" since bite-sized or finely chopped stir-fry ingredients usually tumble back to the center of the wok when agitated.

The curve also provides a larger usable cooking surface versus western-styled pots and pans, which typically have vertical edges. This allows large pieces of food seared at the bottom of the wok to be pushed up the gently sloped sides to continue cooking at a slower rate. While this occurs another ingredient for the same dish needing high heat is being cooked at the bottom. The pointed bottom also allows even small amounts of oil to pool. As such, large food items can be shallow fried, while finely chopped [garlic](#) , [hot peppers](#) , [green onions](#) , and [ginger](#) can be essentially deep-fried in both cases with very small amount of cooking oil.
