

Does your radiator feel colder at the top than at the bottom? Getting things toasty again should be as easy as bleeding your radiator. This releases any trapped air and should only take you a few minutes.

Follow the instructions below for a quick fix:

- Most radiators have a bleed screw at the top of the radiator. Most of the time they are positioned at the ends of the radiator and sometimes they are on the back.

- Place a cloth underneath the bleed valve to catch any leaking water.

- Insert a radiator key (these can be bought from most DIY stores) into the bleed valve and carefully turn it anticlockwise (usually a quarter or half turn will do the trick). The air will start escaping with a hissing sound similar to a bicycle tyre. When water begins to dribble out, all the air is purged.

- Tighten the valve as soon as water begins to flow and use the cloth to clean up any spills (be careful, though, as the water can be scalding hot).

- Switch the heating back on.

- Problem solved!

You need to make sure that your boiler gets serviced yearly by a gas safe (corgi) registered engineer who is fully qualified and experienced who can do proper test and look for any damages or malfunctions. Heating / gas engineers from Advanced Professional Plumbing and Heating Services can you provide you with this service whenever you require. Annual as boiler service and gas safety check are highly recommended to everyone as these are important things that you need to pay attention to.

Having boiler serviced and boiler checked regularly will prevent unnecessary problems and help to avoid the cost of emergency repairs. It can help prevent you from having a major boiler leak or gas leak. When having gas leak, the consequences can be quite severe and cause danger to your own life which mainly is carbon monoxide poisoning. Carbon monoxide poisoning is very dangerous and can cause many symptoms. The most common symptoms are : a headache, feeling nauseous and dizzy, feeling tired, vomiting, abdominal or chest pain, shortness of breath. Some symptoms can occur a few days or even months after exposure to carbon monoxide, such as memory loss and problem with coordination, and anyone experiencing these symptoms should visit the doctor urgently.

So, to keep your own life safe. Let's get your boiler service every year before you come across any danger. Call out team anytime and we can sort this out for you
