11. Building, home refurbishment

About Painting & Decorating

Success in house decoration depends on something more than the use of good paint and a certain amount of skill in its application, essential though these two factors undoubtedly are. At least as important is a thorough knowledge and understanding not only of the properties and possibilities of the materials employed, but also those of the different surfaces over which they are used.

Another factor which may exert a substantial influence on the life and behaviour of paintwork is the weather ([sunglasses](#) or umbrella) and atmospheric conditions prevailing at the time of application.

Tips – If you want to so some painting yourself :

- Buy the best tools and equipment you can afford, especially paint brushes.
- Buy good quality paint and materials. Buying cheap paint is often a false economy as many more coats are usually required.
- Follow the manufacturers instructions on tins and other materials. don't always interpret too literally as there is usually a degree of flexibility, especially in diluting paints.
- The most IMPORTANT rule of all. Preparation; filling, sanding down, sealing surfaces, burning off, stripping walls or wood,removing difficult obstacles, replacing broken glass or rotten wood, masking or covering items and surfaces to be kept clean is the mark of the competent professional decorator. Complete all your preparation before you start to decorate.
- Try to ensure that you have bought enough materials to complete the job. This is essential when buying wallpaper. You must ensure that it is all the same batch number.
- Don't rush the job. Give paints time to dry between coats.
- Keep the area where you are decorating as dust free as possible.

Don't wear woollen garments, as the fibres can easily find their way into your paint, if possible wear cotton overalls or jeans and cotton shirt.
