6. Plasters – Plastering service
7. Decorating service
8. Painter – Painting service
9. Roofers - Roofing service
10. Interior designers – Interior design
11. Building, home refurbishment

Tiling tips

- Preparing the surface and making guide rods (gauge sticks)
- Finding the surface centres and setting out the wall tiles
- Fixing the battens, applying tile adhesive and installing the first tile
- Laying the remaining rows of the ceramic tiles
- Measuring and marking the top, bottom and edge tiles
- Cutting ceramic tiles with different tools
- Cutting tiles around pipes
- Replacing broken tiles

With an almost unlimited choice of patterns, textures and colours to please even the most fastidious tastes, bathroom tiles are the obvious choice for lining your bathroom or shower area. Although some people consider leaving it to the professionals, most bathrooms can be tiled in a

weekend, even if you have had no previous tiling experience.

Before you begin, here are the essential tools you'll need for the job:-

- Tile Cutter

- Tile Saw

- Grout Spreader

- Spirit Level

- Tile Nibblers

- Adhesive Spreader

- Tile-Cutting Jig

- Homemade Gauge Stick

Preparation

Before you begin, it is imperative that the walls are clean, sound and dry. The surface should be as flat as possible and therefore you will need to remove any wallpapering and coat any flaking paint with a stabilizing primer. Now would be a good time to make your very own gauge stick, which will help you plot the position of the tiles on the wall. Find a piece of softwood and lay several tiles next to it (adding spacers if the tiles are square edged or butting together those with lugs) and mark off the position of each tile along the stick.

Setting Out The Tiles

The size and shape of your bathroom ultimately decides on how you set out the walls. Mark the bottom of the lowest row of tiles and temporarily nail a thin guide batten to the wall, aligned with the mark. Use the spirit level to ensure that this is perfectly horizontal. Marking the centre of the wall, use the gauge stick to set out the rows of tiles on each side of it. If the border tiles measure less than half the width of a tile, reposition the rows sideways by half a tile. Use the spirit level to place a guide batten against the last vertical line and nail it to the wall. If you have to tile around an object such as a window, use that as your starting point so that the surrounding

tiles are of equal size. Cut tiles should be placed at the back of the window reveal. Again, use a temporary guide batten above the window to position the row of tiles above it.
